- Networking software allowing revenue collection, access control and reporting at no subscription fee.\*
- Plus, financing is available! Just ask us for the details!

**All from ChargePoint - America's most widely recognized, dependable, and expansive charging network.**

Limited Time Offer.

**\$2699.00**

before tax, shipping or extended warranty. Excludes installation. While supplies last.

\*In lieu of the networking subscription fee, ChargePoint will annually collect the first \$140 of revenue per port along with their 10% processing fee on all revenue collected.

# Control the charging experience at your property.

## Reap the benefits of owning & operating EV charging stations vs. 3rd party ownership.

- Control pricing so it's competitive and attracts drivers to your property
- Keep the charging revenue vs. sharing the majority of it with 3rd party provider
- Optimize your station's "up-time" - don't be dependent on a 3rd party provider for service and maintenance
- Better manage your customer/driver satisfaction
- Control your property's "green" reputation

While the idea of FREE stations from a 3rd party provider sounds enticing, it takes the control out of your hands and has the potential to negatively impact your business investment.

## Don't give your guests an excuse to leave your property.

Adding EV charging is another opportunity to keep your guests happy and on property - and spending money! By not leaving your hotel to fuel up it translates into more revenue via your hotel markets, restaurants, etc.

## Put your property on the map!

Installing EV charging improves your environmentally friendly reputation, but it also puts your business on the map - literally!

EV drivers rely heavily on their on-board GPS systems and phones to find charging. Properties with stations are featured on the map - not only making your property more visible, but also a destination!
